Junpeng Jing

Curriculum Vitae

Beihang University, C.N.
✆ *+8615652583002*
✉ *junpengjing@buaa.edu.cn*
🖥 *tomtomtommi.github.io*
Final-year Master's Student

EDUCATION

2020.9 – Present
Master, *Dept. of Cyber Science and Technology*, Beihang University, C.N..
- GPA: 3.85/4.0 (1/26)
- Group: Multimedia Computing Towards Communications (MC2 Lab)
- Topics: **Stereo Image Super-Resolution**, **Reversible Image Conversion**, **Compression**
- Advisor: Prof. Zhenyu Guan, Prof. Mai Xu, and Dr. Xin Deng

2016.9 – 2020.7
Bachelor, *Dept. of Electronic Information Engineering*, Beihang University, C.N..
- GPA: 3.58/4.0

INTERNSHIP EXPERIENCE

2022.5 – Present
Research Intern, *IS Group*, MEGVII Technology (also known as Face++ until July, 2016).
- Topic: **Stereo Matching**
- Advisor: Jiankun Li, Jiangyu Liu, and Dr. Shuaicheng Liu

RESEARCH INTERESTS

Stereo Matching, Optical Flow, Reversible Image Conversion.

PUBLICATIONS

The publications are also listed in my *Google Scholar Page*.

2022 [1] Zhenyu Guan[1], **Junpeng Jing**[1] (co-first author), Xin Deng, Mai Xu, Lai Jiang, Zhou Zhang, Yipeng Li. *DeepMIH: Deep Invertible Network for Multiple Image Hiding.* IEEE Transactions on Pattern Analysis and Machine Intelligence (**TPAMI**). (*Paper*) (*Code*)

2021 [2] **Junpeng Jing**, Xin Deng, Mai Xu, Jianyi Wang, Zhenyu Guan. *HiNet: Deep Image Hiding by Invertible Network.* Proceedings of the IEEE/CVF International Conference on Computer Vision (**ICCV**). (*Paper*) (*Code*)

COMPETITIONS

2022 [1] **Winner** (**1st** place) at Robust Vision Challenge 2022, **ECCV Workshop**. (*Link*)
- Stereo Matching Track   ***1st Author***

2022 [2] **6th** place at NTIRE Challenge 2022, **CVPR Workshop** (*Link*)
- Stereo Image Super-Resolution Track   ***1st Author***

PATENT

2022 [1] An Image Hiding Technology and Method. C.N. 202011290006.9

RESEARCHES

Reversible Image Conversion

2020.7 – 2020.12 **HiNet: Deep Image Hiding by Invertible Network**, ICCV2021.
- We proposed a novel image hiding network, namely HiNet, based on invertible neural network for the task of large-capacity image hiding.
- We designed two concealing and revealing modules with differentiable and invertible property, aiming to make the image hiding process fully reversible.
- We proposed a low-frequency wavelet loss to control the distribution of secret information in different frequency bands, which significantly improves the hiding security.

2021.1 – 2022.1 **DeepMIH: Deep Invertible Network for Multiple Image Hiding**, TPAMI2022.
- We proposed a novel invertible multiple image hiding framework, to hide multiple secret images into the same cover image in a new manner.
- We investigated two important findings about image hiding, which laid solid foundation for the network and loss function design for multiple image hiding.
- We proposed an importance map module to guide the current image hiding with the results of previous image hiding and to fully utilize the hiding potential of cover image.
- We developed a new multi-stage training strategy with designed stage losses, to improve the training stability and the performance of multiple image hiding.

Stereo Image Process

2022.1 – 2022.4 **StereoSRT: A Stereo Image Super-Resolution Transformer**, NTIRE2022 Challenge.
- We proposed a transformer-based architecture for stereo image super-resolution, simultaneously leveraged the self and cross information between stereo image pairs.
- We introduced a 2-stage training strategy and designed a U-Net based backbone, which re-used the original input to further enhance the output from super-resolution.

2022.5 – Present **CREStereo++: Cascaded Recurrent Network for Robust Stereo Matching**, Robust Vision Challenge 2022.
- We proposed a cascaded recurrent network for robust stereo matching, which had a simplified backbone without any attention mechanism and achieved better performance than CREStereo.
- We introduced a learnable warping module to effectively alleviate the occlusion and mismatch problem caused by traditional warping operation.
- We proposed a multi-scale patch match correlation module, to replace the pixel-based local correlation in the original version, achieving accurate matching results.
- Our method CREStereo++_RVC ranked 1st on ETH3D and Middlebury, and ranked 2nd on KITTI2015, achieving an overall 1st rank in the stereo matching task.
- In preparation for CVPR 2023.

SCHOLARSHIPS

2022	Top-10 Graduate Students	*Top 0.5%, 10,000¥*
	– Highest Honor for the Postgraduates in Beihang University	
2021	National Scholarship	*Top 1%, 20,000¥*
	– Awarded by the National Ministry of Education	
2021	Postgraduate Academic Scholarship	*1st Prize, 7,500¥*
2020	Postgraduate Academic Scholarship	*2nd Prize, 5,000¥*
2017	Science and Technology Scholarship of Beihang University	*2nd Prize, 1,000¥*

HONORS & AWARDS

2021	Outstanding Graduate Student	*Top 5%*
2021	Merit Student	*Top 5%*

2019	National College-student Electronics Design Contest	*1st Author & 2nd Prize*
2019	29th Feng Ru Cup on "Nokia" Innovation Competition	*1st Author & 2nd Prize*
2018	Beijing College-student Electronics Design Contest	*1st Author & 2nd Prize*
2018	COMAP's Mathematical Contest in Modeling	*Honorable Winner*
2017	27th Feng Ru Cup on Innovation Competition	*1st Author & 3rd Prize*

PROJECT

2018 – 2019	National College Student Innovation and Entrepreneurship Training Program – Autonomous Tracking UAV Based on Deep Learning	*1st Author*

SKILLS

Programming: Matlab, Python (PyTorch)

Others: LaTeX, Microsoft Office, Adobe Illustrator

Languages: Chinese (Native), English (Proficient, IELTS: 7)

Interests: Chess, Basketball, Badminton
